

What if you want to keep the orange as it is, but make the blues a different color?

NO PROBLEM!

Click on the drop down menu set on master by default. Change it to one of the color choices to apply the adjustment only to that hue in your image!!

NOTE: I started with Blue, and that did nothing to the blue in my image, so I went back and selected CYAN... Bingo.

You may have to play with which hue to adjust in your various images via trial and error. Again, that is what rocks about adjustment layers.
