

# TONE SCALE

Practice the following techniques to create tone:

**Shading** is when you blend the media evenly onto the paper surface to create a variation from light to dark. The more media you apply, the darker the tone.

**Hatching** is when you apply the media in short sharp strokes to create a tone. The more strokes you apply the darker the tone.

**Cross-Hatching** is similar to hatching but this time your strokes can cross over each other. The more strokes the darker the tone.

**Stipple** is when you apply small dots of media to the paper surface to create a tone. The more dots the darker the tone.
