

How to draw a simple sailboat

start by drawing lightly so you can erase later.

FIRST draw the line where the boat sits in the water - keep it horizontal so the boat does not look like it is going down hill.

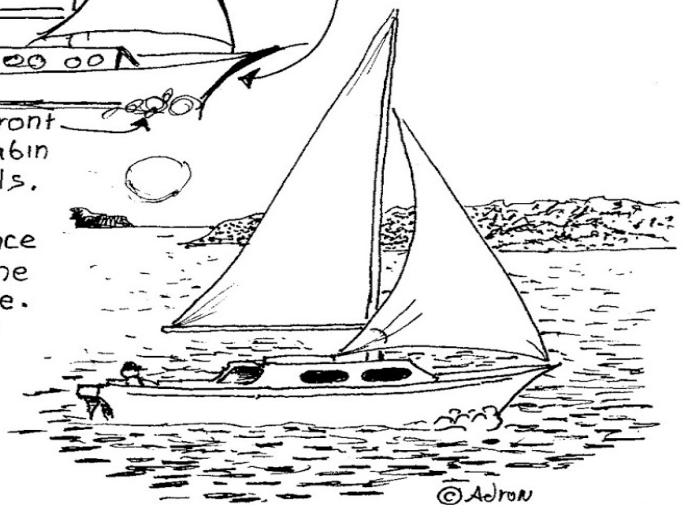

Use simple shapes to form the basic design; triangles for the sails and front, rectangles for the boat.

Use two lines for the mast. the front sail has a curve the front of the boat has a curve.

there is a cabin, it is a rectangle that has triangles in front and back.

there is a splash at the front there are windows in the cabin they can be circles or ovals.

Draw islands in the distance use a lot of choppy, jagged line to give it contrasting texture. Draw the water with thick lines in the lower part and thinner as you go up.
