

THE PLANETS

MAD LIBS™
What's So Funny About Spelling?

There are eight planets in our solar system.

They all _____ around the sun.

The sun is a gigantic ball of _____ that has
been _____ for millions of years. Jupiter is the largest
_____ in our solar _____. Saturn is almost as large
as Jupiter. It is surrounded by big _____, which are really
a lot of small moons and pieces of rock that are _____ around
the planet. The planet closest to the sun is called _____

and the one farthest away is called _____.

Earth is the fifth-largest _____.

We must always remember, however, that we

live in a very _____ solar system,

which is only a tiny _____ in the

galaxy, which is a/an _____

part of the whole universe.
