

Layers of the Rainforest

Emergent

These are the tallest trees in the rainforest. Some can grow up to 50 metres tall.

Canopy

The canopy is the thickest layer of the rainforest and is home to many species of birds and animals.

Under Canopy

This layer has shorter, young trees and some shrubs and bushes.

The Shrub Layer

This layer is home to many insects and larger animals. This layer receives little sunlight but a few smaller plants and shrubs grown here.
