

edible schoolyard's
IN THE GARDEN
{ scavenger hunt }

This green,
flat item grows
off a flower's stem,
off tree branches
and off the head
of crops.

This colorful and
beautiful insect
flutters around
from flower to
flower.

This slow and
slimy creature
munches on
leaves and hides
in its round
shell.

She whistles
a sweet song
as she flies in
the sky.

These
buzzing
creatures are
known for
making honey
and
pollinating
flowers.

This long and wet
creature wiggles
around in the dirt
making compost.

These sweet
smelling beauties
provide pollen
for bees and
grow fruit.

These hard
pieces of the
Earth's surface can
be found under soil
and all around the
garden.

The tiny
plants have strong
smells and are
often used to add
flavor to food.
