15. $0.004 \div .07 =$ _____

16. $0.547 \div 4.02 =$ _____

17. $6093.3 \div 9.318 =$ _____

Remember

If both the numbers inside and outside of the division box have decimals, look at the divisor (that's the number outside of the division box) and count how many places are needed to move the decimal point to make it a whole number. Move the decimal point of the number inside of the division box (the dividend) the same number of places. Place the decimal point in the quotient (the answer) directly above the new decimal point.
